DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4 of copending Application No. 09/773,792. Although the conflicting claims are not identical, they are not patentably distinct from each other because the two applications are claiming common subject matter, as follows:

Both applications disclose an a transmission electron microscope equipped with energy filter comprising: an objective lens system consisting of at least one lens excited with excitation current; four intermediate lens systems which are excited with excitation currents; and a projector lens system consisting of at least one lens excited with excitation current; and means for adjusting the excitation currents supplied to the lenses, thus preventing rotation of a created image, the total sum of products of the numbers of turns of wire on coils of the lenses of said objective lens system and the four intermediate lens systems, and projector lens system and their respective excitation currents is kept constant.

The dependent claims 3, 6, and 4, 7, of the Application correspond exactly to the dependent claims 3 and 4 of the copending application. Claims 1-2, and 5, of the Application correspond, respectively, to claims 1 and 2 of the copending application and are only slightly different in their wordings.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

- 3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. K. Tsuno (6,323,485 B1) discloses an electron microscope equipped with an energy filter which can provide higher energy resolution without modifying the energy filter by optimally setting the magnification of the projector lens system.
